

Julian Camilo Carvajal Mejia

Full Stack & Mobile Developer | Networking & Infrastructure

Popayán, Cauca, Colombia (Remote / Hybrid / On-site) · jucarvajal2000@gmail.com

Professional Summary

Full Stack Developer with solid knowledge of JavaScript, React, and Node.js, plus mobile development using Flutter and React Native, complemented by certified networking training (CCNA1 - Cisco) and hands-on experience installing and configuring residential and small-scale networks. I bring experience as an external consultant and in academic and research projects built with the MERN stack, Django, and Spring Boot, along with strong fundamentals in network planning (routing, switching, subnetting, VLANs). I hold a Systems Technician diploma (SENA) and am currently pursuing a Systems Engineering degree. I am eager to grow in a collaborative, agile environment, contributing scalable, user-focused software solutions with an integral view of infrastructure and networking.

Technical Skills

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3

Mobile: Flutter (Dart), React Native

Backend: Node.js, Express.js, Java (Spring Boot), Django, Python

Databases: MongoDB, PostgreSQL

Networking: LAN/WAN planning, subnetting, static & dynamic routing, switching, VLANs

Protocols: TCP/IP, DNS, DHCP, HTTP/S

Infrastructure: Routers, switches, Wi-Fi access points, structured cabling (UTP Cat5e/Cat6)

DevOps & Tools: Git, Docker, npm, VS Code, Packet Tracer (Cisco)

Other: RESTful APIs, agile methodologies (Scrum), microservices architecture, IoT, cybersecurity, Windows / Linux (fundamentals)

Professional Experience

External Consultant · Flutter Mobile Developer · Independent project

6 months

- Developed cross-platform mobile applications (iOS and Android) with Flutter and Dart, meeting the client's functional requirements.
- Designed responsive interfaces following Material Design principles and mobile UX/UI best practices.
- Integrated backend services through RESTful API consumption, state management, and secure authentication handling.
- Collaborated directly with the client gathering requirements, proposing technical improvements, and delivering iterations under agile methodologies.
- Performed testing, debugging, and performance optimization to ensure a smooth experience across different devices.

Technologies: Flutter, Dart, REST APIs, Git, Firebase

Terra-Smart · Smart Soil Monitoring Platform · PhantomSecure / SumoThings

Jan 2025 - Jun 2025

Scrum Master & Full Stack Developer

- Developed a smart web platform to monitor soil parameters such as nitrogen, phosphorus, potassium, pH, and humidity.
- Implemented Machine Learning models (Random Forest) to generate automatic fertilization recommendations.

- Built backend services using Node.js and integrated data from IoT devices and uploaded files.
- Developed the frontend with React, enabling real-time visualization of soil data.
- Led the team as Scrum Master under an agile methodology.

Technologies: React, Node.js, Python, Machine Learning, Docker, REST APIs, IoT

IoT Security Startup · Network Security Prototype

Jul 2025 - Dec 2025

Backend Developer

- Designed and implemented a prototype focused on improving security in IoT environments.
- Developed backend services using Node.js to manage device communication and authentication.
- Applied containerization with Docker for secure and scalable deployment.
- Participated in system architecture design with emphasis on data protection and scalability.
- Worked with REST APIs and secure communication principles for IoT devices.

Technologies: Node.js, Docker, REST APIs, IoT Architecture, Cybersecurity

MyBill · Financial Risk & Billing Management System

2025

Backend Developer

- Developed backend services for a financial platform focused on billing and risk analysis.
- Implemented RESTful APIs using Java (Spring Boot) for handling financial data and calculations.
- Worked with DTOs, validations, and business logic related to financial indicators.
- Participated in debugging, testing, and integration of services within a microservices-oriented architecture.

Technologies: Java, Spring Boot, PostgreSQL, REST APIs, Git

Mobile Development Projects · Academic projects

2024 - 2025

Mobile Developer

- Developed mobile applications using React Native for academic purposes.
- Implemented navigation, forms, API consumption, and responsive mobile interfaces.
- Focused on usability, performance, and mobile-first design principles.

Technologies: React Native, JavaScript, REST APIs

Residential Networks · Installation & configuration · Independent projects

Hands-on experience

Networking Technician

- Installed and configured home networks (LAN/Wi-Fi), including structured cabling, routers, and wireless access points.
- Diagnosed and solved residential connectivity issues (signal loss, IP conflicts, Wi-Fi channel configuration).
- Configured DHCP, static IP addressing, WPA2 security, and MAC filtering.
- Advised end users on proper use of network equipment and security best practices.

Technologies/Tools: Routers, Switches, UTP Cat5e/Cat6 Cabling, Packet Tracer

Education

Systems Engineering (B.Sc.) · Universidad del Cauca · Popayán, Colombia

Expected graduation: 2026

Systems Technician · SENA - Servicio Nacional de Aprendizaje · Colombia

Technical training in equipment maintenance, operating systems, networking, and technical support.

Certifications

CCNA1 - Introduction to Networks · Cisco Networking Academy

2025

- Networking fundamentals: OSI model, TCP/IP, IPv4/IPv6 addressing, and subnetting.
- Basic configuration of Cisco routers and switches, static and dynamic routing.
- LAN/WAN network design and planning, topologies, and network security.

Additional Information

Languages: Spanish (native), English (intermediate-advanced)

Availability: Remote, hybrid, or on-site

Soft skills: Communication, adaptability, teamwork, continuous learning
